Paper 4 Mechanics February/March 2020

1 hour 15 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.
- Where a numerical value for the acceleration due to gravity (g) is needed, use 10 m s⁻².

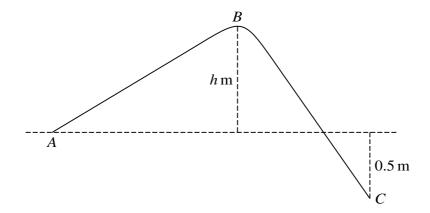

INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [].

This document has 16 pages. Blank pages are indicated.

This document has 16 pages. Blank pages are indicated.

BLANK PAGE

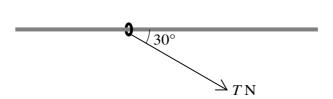

Three coplanar forces of magnitudes 100 N, 50 N and 50 N act at a point A, as shown in the diagram. The value of $\cos \alpha$ is $\frac{4}{5}$.

Find the magnitude of the resultant of the three forces and state its direction.	[3]

	stance forces of 250 N on the car and 100 N on the trailer.
(a)	Find the tension in the tow-bar. [2
(b)	Find the power of the engine of the car at the instant when the speed is $20 \mathrm{ms^{-1}}$.

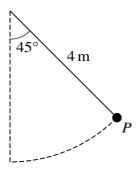

(a)	Find the greatest height above the ground reached by P .
(b)	Find the length of time for which P is at a height of more than 3.6 m above the ground.
(D)	
	1 and the length of time for which T is at a neight of more than 3.0 m above the ground.
	Third the length of time for which 7 is at a neight of more than 3.0 in above the ground.

The diagram shows a ring of mass 0.1 kg threaded on a fixed horizontal rod. The rod is rough and the coefficient of friction between the ring and the rod is 0.8. A force of magnitude T N acts on the ring in a direction at 30° to the rod, downwards in the vertical plane containing the rod. Initially the ring is at rest.

Find the greatest value of T for which the ring remains at rest.	[4]

Find the acceleration of the ring when $T = 3$.

	ar of mass $1800\mathrm{kg}$ is travelling along a straight horizontal road. The power of the car's engine is stant. There is a constant resistance to motion of $650\mathrm{N}$.
(a)	Find the power of the car's engine, given that the car's acceleration is $0.5 \mathrm{ms^{-2}}$ when its speed is $20 \mathrm{ms^{-1}}$.
(b)	Find the steady speed which the car can maintain with the engine working at this power. [2]

A block of mass $m \log$ is held in equilibrium below a horizontal ceiling by two strings, as shown in the diagram. One of the strings is inclined at 45° to the horizontal and the tension in this string is T N. The other string is inclined at 60° to the horizontal and the tension in this string is 20 N.

Find T and m .	[5]

The diagram shows a velocity-time graph which models the motion of a car. The graph consists of four straight line segments. The car accelerates at a constant rate of $2 \,\mathrm{m\,s^{-2}}$ from rest to a speed of $20 \,\mathrm{m\,s^{-1}}$ over a period of T s. It then decelerates at a constant rate for 5 seconds before travelling at a constant speed of $V \,\mathrm{m\,s^{-1}}$ for 27.5 s. The car then decelerates to rest at a constant rate over a period of 5 s.

(a)	Find T .	[1]

speed is one third of the total distance travelled, find V .	[

Two particles A and B, of masses 0.3 kg and 0.5 kg respectively, are attached to the ends of a light inextensible string. The string passes over a fixed smooth pulley which is attached to a horizontal plane and to the top of an inclined plane. The particles are initially at rest with A on the horizontal plane and B on the inclined plane, which makes an angle of 30° with the horizontal. The string is taut and B can move on a line of greatest slope of the inclined plane. A force of magnitude $3.5 \,\mathrm{N}$ is applied to B acting down the plane (see diagram).

(a)	Given that both planes are smooth, find the tension in the string and the acceleration of B . [5]

(b)	It is given instead that the two planes are rough. When each particle has moved a distance of 0.6 m from rest, the total amount of work done against friction is 1.1 J.						
	Use an energy method to find the speed of B when it has moved this distance down the plane. [You should assume that the string is sufficiently long so that A does not hit the pulley when it moves $0.6 \mathrm{m}$.]

Paper 4 Mechanics

October/November 2020

1 hour 15 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.
- Where a numerical value for the acceleration due to gravity (g) is needed, use 10 m s⁻².

INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [].

This document has 12 pages. Blank pages are indicated.

(a)	Find ν .
(b)	Find the greatest height of P above the ground. [2]

	le of 20° to the horizontal. The box moves along a line of greatest slope against a frictional force of N. The force pulling the box is parallel to the line of greatest slope.
(a)	Find the work done against friction.
(b)	Find the change in gravitational potential energy of the box.
(c)	Find the work done by the pulling force.

`		
)	Draw a diagram showing all the forces acting on the block.	
)	Find the coefficient of friction between the block and the table.	

Find the two possible values of the loss of kinetic energy due to the collision.	[6]
	•••••••••••

A car of mass 1600 kg is pulling a caravan of mass 800 kg. The car and the caravan are connected

a) Th	ne car and caravan are travelling along a straight horizontal road.
(i) Given that the car and caravan have a constant speed of 25 m s ⁻¹ , find the power of the car engine.
(i	i) The engine's power is now suddenly increased to 39 kW. Find the instantaneous acceleration of the car and caravan and find the tension in the tow-bar.

(b)	The car and caravan now travel up a straight hill, inclined at an angle of $\sin^{-1} 0.05$ to the horizontal, at a constant speed of $v \text{m s}^{-1}$. The car's engine is working at 32.5 kW.
	Find v . [3]

As shown in the diagram, particles A and B of masses $2 \, \text{kg}$ and $3 \, \text{kg}$ respectively are attached to the ends of a light inextensible string. The string passes over a small fixed smooth pulley which is attached to the top of two inclined planes. Particle A is on plane P, which is inclined at an angle of 10° to the horizontal. Particle B is on plane Q, which is inclined at an angle of 20° to the horizontal. The string is taut, and the two parts of the string are parallel to lines of greatest slope of their respective planes.

)	It is given that plane P is smooth, plane Q is rough, and the particles are in limiting equilibrium.	quilibrium			
	Find the coefficient of friction between particle B and plane Q .	[5]

4 Two cyclists, Isabella and Maria, are having a race. They both travel along a straight road with constant acceleration, starting from rest at point *A*.

Isabella accelerates for 5 s at a constant rate $a \,\mathrm{m\,s^{-2}}$. She then travels at the constant speed she has reached for 10 s, before decelerating to rest at a constant rate over a period of 5 s.

Maria accelerates at a constant rate, reaching a speed of $5 \,\mathrm{m\,s^{-1}}$ in a distance of 27.5 m. She then maintains this speed for a period of $10 \,\mathrm{s}$, before decelerating to rest at a constant rate over a period of $5 \,\mathrm{s}$.

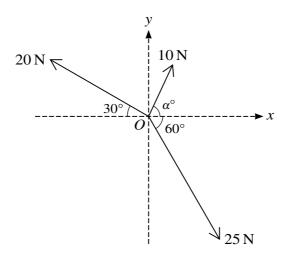

G	iven that $a = 1.1$, find which cyclist travels further.

A slide in a playground descends at a constant angle of 30° for 2.5 m. It then has a horizontal section in the same vertical plane as the sloping section. A child of mass 35 kg, modelled as a particle P, starts from rest at the top of the slide and slides straight down the sloping section. She then continues along the horizontal section until she comes to rest (see diagram). There is no instantaneous change in speed when the child goes from the sloping section to the horizontal section.

The child experiences a resistance force on the horizontal section of the slide, and the work done against the resistance force on the horizontal section of the slide is 250 J per metre.

(a)	It is	given that the sloping section of the slide is smooth.
	(i)	Find the speed of the child when she reaches the bottom of the sloping section. [3]
	(ii)	Find the distance that the child travels along the horizontal section of the slide before she comes to rest. [2]

Find t	the coeffic	eient of frict	ion betwe	en the cl	nild and t	the slopin	g section	of the sl	ide.

Paper 4 Mechanics May/June 2021

1 hour 15 minutes

You must answer on the question paper.

You will need: List of formulae (MF19)

INSTRUCTIONS

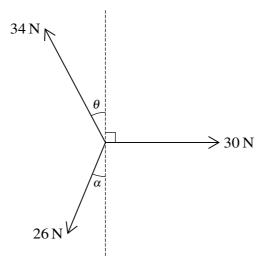

- Answer all questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do not use an erasable pen or correction fluid.
- Do not write on any bar codes.
- If additional space is needed, you should use the lined page at the end of this booklet; the question number or numbers must be clearly shown.
- You should use a calculator where appropriate.
- You must show all necessary working clearly; no marks will be given for unsupported answers from a calculator.
- Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place for angles in degrees, unless a different level of accuracy is specified in the question.
- Where a numerical value for the acceleration due to gravity (g) is needed, use 10 m s⁻².

INFORMATION

- The total mark for this paper is 50.
- The number of marks for each question or part question is shown in brackets [].

This document has 12 pages.

-	A particle of mass $0.6 \mathrm{kg}$ is projected with a speed of $4 \mathrm{ms^{-1}}$ down a line of greatest slope of a smooth plane inclined at 10° to the horizontal.								
	Use an energy method to find the speed of the particle after it has moved 15 m down the plane. [3]								

Coplanar forces of magnitudes $34\,N$, $30\,N$ and $26\,N$ act at a point in the directions shown in the diagram.

Given that $\sin \alpha = \frac{5}{13}$ and $\sin \theta = \frac{8}{17}$, find the magnitude and direction of the resultant of the three proces.
